

VYNETA PRACTICAL RESOURCES

LESS GUESSWORK. A BETTER FIRST TEST.

Faceless Video Starter Kit

Plan, test and repeat one useful short-video workflow.

READ / FILL IN / TEST / DECIDE

For solo creators, freelancers and small business marketers

Leave with a video brief, an editable script, a cost calculation and a repeat-or-stop decision.

How to use: Read pages 2-5, then fill in pages 6-7. Use a PDF reader that supports forms and save a local copy, or print the worksheets. Browser viewers may not save form entries reliably.

Free to use without a software purchase. Vendor-neutral worksheets. No promised traffic, revenue, time savings or ranking results.

01 / WORK THROUGH THE DECISION

Choose a repeatable job

Define the output before choosing software

Pick one audience, one question and one format. A narrated explainer and a cinematic AI scene are different jobs. Do not compare them using the same feature checklist.

A small first test

Produce one 30-60 second vertical explainer answering a question your audience already asks. This is a suggested trial task, not a platform requirement. Keep the same script when comparing two tools.

Decide what must remain under your control

List the parts you need to edit: wording, scene choice, narration, captions, music and export settings. Confirm each requirement in the actual plan you would buy; a demo does not establish plan access.

Your decision rule

Choose the workflow that produces an acceptable video at an acceptable total cost. If no tool meets your must-haves, keep your existing editor or change the brief before paying.

Fictional example - not a Vyneta test result

A freelancer needs two educational clips each week, narrated in English, with editable captions. The first test explains how to avoid buying a tool before defining the job. Cinematic realism and automatic posting are not required.

02 / WORK THROUGH THE DECISION

Write a script you can verify

Use four parts

Hook: name a familiar problem. Explanation: teach one mechanism. Example: show one concrete case. Next step: give the viewer one action they can take without buying anything.

Keep claims separate from illustrations

A fictional scenario is not evidence. Mark numbers invented for illustration as hypothetical. Check factual claims against a reliable original source before generating visuals or narration.

Reusable drafting prompt

Write a short narrated explainer for [audience] about [question]. Use only the facts below. Structure: hook, explanation, example, one next step. Mark missing facts as NEEDS CHECK. Do not invent statistics, results or testimonials. Suggest one visual per sentence. Facts: [paste verified notes].

Example script - about 65 words

Before buying an AI video tool, write down one video you actually need to make. A cinematic scene generator and a narrated Shorts tool solve different problems. Test the same short script in each candidate. Count the edits, check the export rules, and calculate the cost of a usable result. Choose the workflow you can repeat next week, not the demo that looks most impressive.

Make the script your own

The sample is reusable. Adapt it to your audience and verify any facts you add. Read it aloud before generation; shorten it if the chosen voice cannot deliver it clearly at a comfortable pace.

03 / WORK THROUGH THE DECISION

Turn the script into editable scenes

Map meaning, not just keywords

Each scene should explain the sentence it accompanies. Use a simple diagram, your own screen recording or a licensed clip when it communicates better than an unrelated generated image.

A four-scene plan

1. Tool-shopping tabs: show the decision problem. 2. Two different outputs: narrated clip versus cinematic scene. 3. A test checklist: edits, export and cost. 4. A weekly calendar: repeatability. Treat these as visual directions, not proof of results.

Check media rights separately

Confirm the license for music, voices, stock media and any uploaded assets. A software subscription does not automatically clear third-party trademarks, likenesses or assets you supply.

Separate generation from export

Check whether your intended plan permits downloading, watermark removal, the resolution you need and commercial use. Verify export access before spending the trial on a large batch.

Before you buy

AITuber publishes a credits guide linked on page 8. Use current vendor documentation for billing and export restrictions. This kit is compatible with different workflows and is not an official AITuber product.

04 / WORK THROUGH THE DECISION

Measure one usable result

Record the complete effort

Log setup, generation, editing and review time separately. A two-minute generation followed by forty minutes of repair is not a two-minute workflow.

Count rejected outputs and retries

Record total credits or charges consumed by the test, including abandoned attempts. Do not divide by all generated videos when only some were usable.

Two costs to calculate

Cash cost per usable video = allocated subscription cost + usage charges + licensed assets, divided by usable videos. Then add labor separately: total minutes / 60 x your hourly value. Do not count included credits again as a second cash charge.

Hypothetical worked example

A \$30 monthly plan is allocated across 10 usable videos: \$3 each. At 18 minutes per usable video and a \$20/hour time value, labor is \$6 each. Total economic cost is \$9 per video. These are invented inputs, not vendor pricing or promised savings.

A practical gate

Set your cost ceiling and editing-time ceiling before testing. If a required control or license is missing, it fails the gate even if the video looks good.

05 / FILLABLE WORKSHEET

Your working brief

Use short notes. Keep detailed evidence in your own files and paste the reference here. Do not enter passwords, customer identifiers or confidential client data.

Audience + question

Output + must-have controls

Verified facts + source links

Script: hook / explanation / example / next step

Scene plan + asset permissions

06 / FILLABLE WORKSHEET

Your test record + decision

Use short notes. Keep detailed evidence in your own files and paste the reference here. Do not enter passwords, customer identifiers or confidential client data.

Tool / plan / date checked

Setup / generation / edit / review minutes

Credits used incl. retries / usable videos / rejected videos

Monthly plan / allocation / extra charges / time value

Cash cost per usable video / labor cost / total cost

Cost ceiling / editing ceiling / missing must-haves

Repeat, revise or stop? Reason + next test date

07 / DECISION CHECKLIST + FURTHER READING

Finish the test, then choose your next step

- ☐ The narration matches the script and verified facts.
- ☐ Scenes match the explanation; no misleading before/after imagery.
- ☐ Captions are legible, correctly timed and proofread.
- ☐ Music and voice levels are usable; asset rights are documented.
- ☐ A test export plays correctly on the intended device.

Make the next action specific

If the workflow passes your requirements, compare current plans and verify the remaining limits before subscribing. If it fails, revise the brief or consider an alternative. You do not need to purchase software to use this workbook.
